Organization’s Mission Statement:
The mission of the Centers for Disease Control and Prevention (CDC) is to promote health and quality of life by preventing and controlling disease, injury, and disability. To accomplish this mission, CDC monitors health, investigates health problems, and promotes sound public health policies and programs. CDC core values—respect, integrity, and accountability—serve as the foundation for all activities at the agency.

The Office of Science (OS) is responsible for ensuring integrity and excellence in science at CDC. The Public Health Ethics and Strategy Unit provides leadership in public health ethics and works with CDC staff to integrate the tools of ethical analysis into decisions and day-to-day activities across CDC.

Summary of organization’s primary programs and services:
The Public Health Ethics and Strategy Unit collaborates with the CDC Public Health Ethics Committee (PHEC) to identify, analyze, and resolve ethical issues that arise in public health practice at CDC. Activities include a consultation process for any CDC program facing an area of ethical uncertainty or conflict for which it seeks guidance. Other activities include educational trainings and seminars on both general and specific public health ethics topics that are open to all CDC staff. We have developed several public health ethics training resources, including a training manual, online training, a repository of public health ethics case studies, and an open access public health ethics casebook. The casebook highlights global perspectives on the ethical challenges of public health practice and is available free of charge at Springer Press. We also provide input on ethical issues associated with CDC’s emergency response efforts through the CDC Emergency Operations Center Ethics Desk.

Intern’s title:
Public Health Ethics Intern

Number of interns requested by your organization:
One

Internship project/job description:
This placement will provide interns with experience in day-to-day public health ethics activities at the nation’s premiere public health agency. Efforts will be made to identify a project that reflects both the intern’s interests and the current needs of CDC. This project potentially could include the development of a case study or the exploration of an ethical concern associated with one of CDC’s programmatic areas. The intern will also have opportunities to engage in other activities that arise during their internship, including participating in a public health ethics consult. The intern is expected to provide a presentation about his or her project during the June PHEC meeting to be held on June 22, 2021 from 10:30 - noon. Expected work hours are Monday through Thursday, 8:00 am – 4:30 pm.
The internship may need to be conducted on a virtual basis depending on the status COVID-19 pandemic during the summer 2021. This would require the intern to work at an alternate work site using their own computer equipment and internet access, and participate in meetings through internet (e.g., Skype, Microsoft Teams, or Zoom) or telephone connection.

**Qualifications:**
The position is open to graduate level Emory University students enrolled in either a master’s or doctoral level degree program who have an interest in the intersection of ethics and public health. Knowledge of basic ethical and health/science concepts, good critical reasoning and analysis skills, and an ability to communicate well both verbally and in writing are important for this position. Some experience with public health practice is desirable but not required.

**If there are other requirements for this position (security check, drug screen, immunizations, etc.) please note them here:**
Security clearance (including finger printing) and proof of health insurance are required.

**Will the internship require that the student have a car?**
No

**Is placement site accessible by public transit or other transportation options?**
Yes.
As noted above, the status of the COVID-19 pandemic at the time of the internship will determine if the internship will need to be conducted in whole or partially outside of CDC office space.
